

A RESCUE ROOTER

Advice on Drain Cleaners

Read About Drain Cleaners from Experienced Hamilton Plumbers

Chemical drain cleaners seem like a good idea, right? You simply pour them down the drain and that nasty clog disappears like magic. Well, it's not quite that easy. There is no guarantee the product will work and what's worse, these chemicals can have a negative impact on your home and the environment. Keep reading to learn more about the problems with chemical drain cleaners from the expert Hamilton plumbers at A Rescue Rooter.

1. Chemicals Can Actually Damage Your Pipes

You don't want to sacrifice the health of your pipes just to clear a clog. The chemicals in drain cleaners used to break down organic matter can actually corrode your pipes over time. Repeated use of these products may do more harm than good and eventually lead to costly repairs.

2. Will They Work? There's No Guarantee

Before going out and spending a bunch of money on chemical drain cleaners, understand one thing – they may not work. There's no guarantee and chances are you will lose both time and money. Instead, you might try using products you already have around the house, like a mixture of vinegar and baking soda.

3. Consider the Environment

As plumbers in Hamilton, Burlington and the Niagara Region, A Rescue Rooter is proud to live and work in beautiful natural surroundings. We believe in doing our part to protect the environment and you can as well. Chemical drain cleaners are bad for the environment and the health of our community. Please dispose of them properly, or even better, avoid using them at all.

4. Chemicals are Dangerous for You and Your Family

The next time you go shopping, check out the warning label on your average chemical drain cleaner. It's not something you want to be breathing in and certainly not something you want around your children. Please take special care to keep these products out of their reach.
